# Recovery resilience plan

## Software application for managing and prioritizing activities

- A Methodology for planning and management of national and municipal roads has been developed ;
- It covers the determination of all the characteristics, on the basis of which the activities of planning and prioritization of road maintenance, major repair and reconstruction of roads are carried out;
- Created database structure for all characteristics (including for the existing operational status of all elements of the road);
- Criteria and an algorithm for planning and prioritizing activities have been defined in order to effectively spend public funds earmarked for roads.

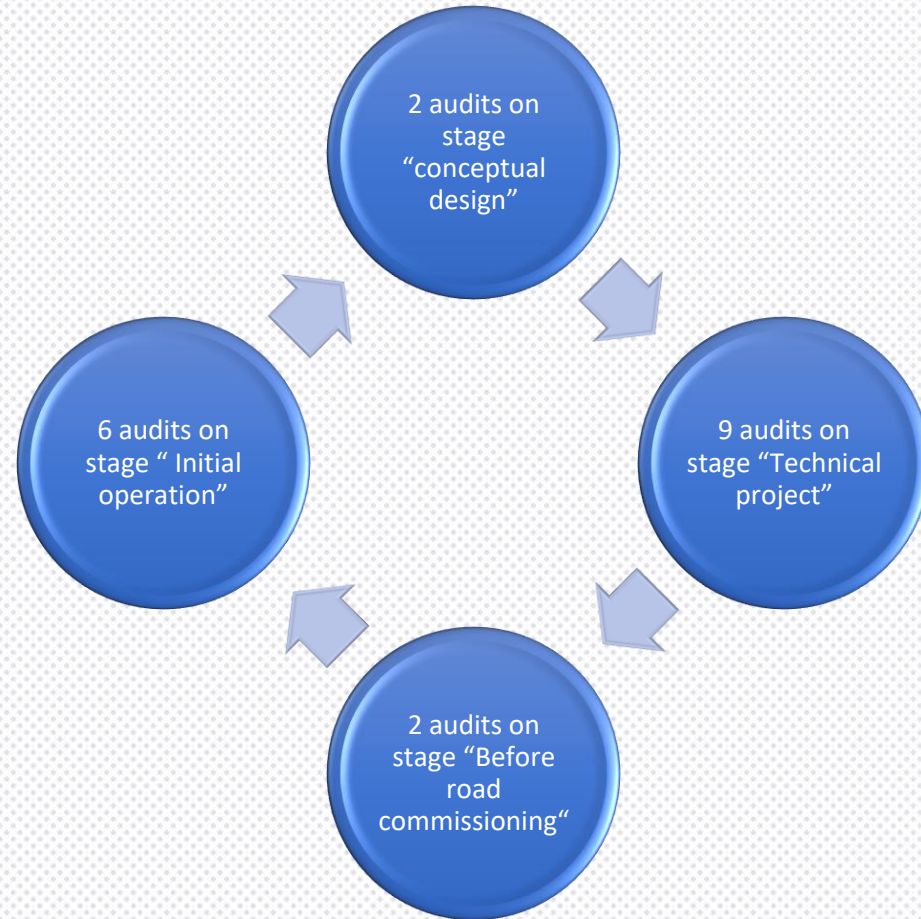

*Road safety procedures*

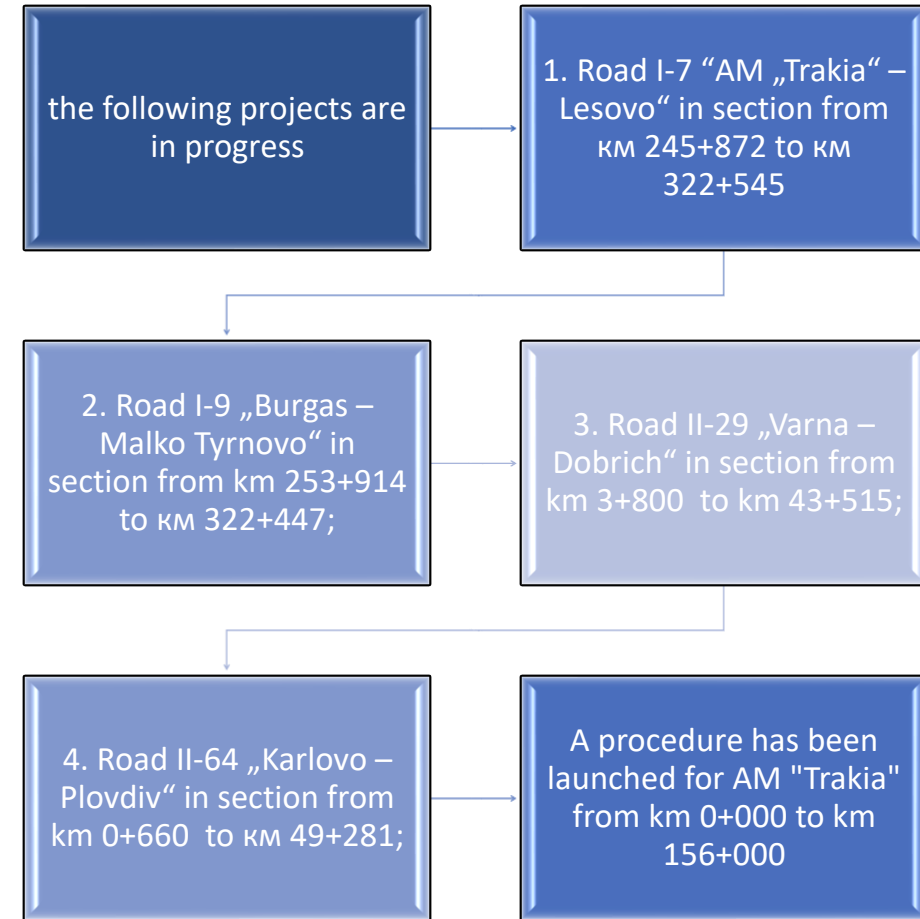

## Road safety audits for year 2022 and 2023

## Road safety impact assessment

## Black spots

40 black spots
